I am available for questions one-on-one most evenings during weekdays.

There are two ways to contact me:

Remind App

Using the remind app from www.remind.com, join the class called **@ardentapcs**
You can do this using the iOS or Android app or the web site.
This is a chat environment that allows you to ask questions <u>without</u> having to provide me your personal contact information.

Work Mobile (Google Voice)

You can TEXT questions to: **(949) 542-6858**. I am able to respond to these when I am at my desk working with student questions through my web browser. This interface is easier to send pictures of text pages, for instance, or images of your computer screen.

If you need more assistance than can be provided over the network, I can come and meet you here at Ardent Academy some evenings. You'll need to contact me through Remind or Google Voice and ask to schedule an appointment.

Exam Mega Review

Tentative schedule: Saturday, May 11 from 10:00am-3:00pm or 1:00pm-5:00pm. Location TBA.

On this day I will go through EVERY single topic on the APCSA Topic Guide, including a definition and code example for every concept. I will also allow questions on specific topics (not very general ones). While there is no cost for the review, we do usually get a excellent grazing stand of food together, and a contribution towards that food is your ticket in. ;)

Review Book

Barron's AP Computer Science A with Online Tests Eighth Edition is my recommended review book for the exam. It is much harder than the actual exam, with many tricky questions. Because the questions are like this though, I recommend that you do the practice MC questions provided in the Course Description as well as the 2015 released exam and the official practice exam (separate from the Course Description).
